

SECURITY. CONNECTIVITY. CONTINUITY.

Protect your business. Keep it running.

Email security, resilient infrastructure and managed IT for organisations across Kenya. We begin with your environment and turn requirements into a clear delivery scope.

Email & Email Security

Practical help with email threats, mail platforms, migration, authentication and retention.

Examples: Email Security & Secure Gateways; Email Migration & Platform Recovery; Business Email Platforms.

Cybersecurity

Bring visibility, protection and operational response together across the systems that matter.

Examples: Managed Detection & Response / XDR; SIEM & Log Management; SOC Service Integration.

Networks & Connectivity

Firewalls, branch connectivity, switching, Wi-Fi and property connectivity designed around your environment.

Examples: Firewalls & Secure Remote Access; SD-WAN & Branch Connectivity; Switching & Secure Wi-Fi.

Servers, Backup & Recovery

Servers, virtualisation, data protection, high availability and disaster recovery with recovery testing in view.

Examples: Servers & Virtualisation; Backup & Restore Testing; Disaster Recovery & Secondary Sites.

Managed IT & VoIP

Maintenance, monitoring, office communications and coordinated IT services for your team.

Examples: Managed IT & Maintenance Contracts; VoIP & Business Communications; Office in a Box.

Assessments & Advisory

Technical assessments, governance reviews and specialist advice grounded in your systems and priorities.

Examples: Application, Mobile & Network Penetration Testing; Governance, Risk & Privacy Readiness; Network Security Reviews.

A CLEAR PATH FROM REQUIREMENT TO DELIVERY

Expertise that carries through.

An individual project or an ongoing service should have clear responsibilities, useful deliverables and a practical handover.

01 Understand

Review your objectives, current environment, constraints and dependencies.

02 Implement

Agree the scope, commercial terms and acceptance criteria before making changes.

03 Support

Test the result, document what was delivered and define ongoing responsibilities.

Help us prepare a useful proposal

- The service or business problem you want to address.
- Your current platforms, locations and approximate user or system count.
- Availability, security, retention or recovery requirements.
- Your intended timeline, budget range and procurement requirements.

Clear scope. Clear accountability.

Deliverables, licences, service hours, support commitments and any delivery partners are identified in the proposal. A public enquiry does not create an order or service-level agreement.
